# **TCAVBZ-TCAVIZ 1270÷21600**

## **TCAVSZ 1270÷21600**

### **Z-Power Range**

*Packaged air cooled water chillers with axial fans.  
Range with semihermetic screw compressors and R134a refrigerant gas.*

**Index**

## Description of the unit

### A complete and flexible range

Thirty-two models from 270 to 1600 kW. This allows a punctual choice of the model depending on the cooling capacity requested in utility without waste. The Z-POWER range chillers are also suitable for all types of installation, also thanks to the extended functioning limits. The standard unit works regularly from 42+45°C of outdoor air temperature up to 5°C (up to -15°C with accessory FI15). Also, it can function up to 50°C with partialised cooling capacity.

### ESEER and IPLV

The chillers function at medium-level during their life span, supplying lower cooling capacities with respect to those for which they were purchased. To evaluate the average efficiency, use ESEER (European) and IPLV indexes (American). The chillers in the Z-POWER range have been developed to allow excellent efficiency at partial loads and to obtain high ESEER and IPLV values, with consequent decrease of energy consumption.

### Components optimised for R134a

The components used in the Z-POWER range have been appropriately developed to perform at high energy levels with R134a gas. The screw compressors and the tube and shell or plate heat exchangers dedicated to this gas are among the top of the range elements. The ventilating section has been dimensioned to allow excellent heat exchange with reduced noise levels. Moreover, the electronic expansion valve allows precise, quick and punctual regulation in the different load conditions.

### The versions

Different versions are available to respond to the specific noise requirements of the installations. The decrease in noise of the soundproofed version, with acoustic insulation of the compressors compartment, can be further implemented thanks to the reduction of the speed of the fans in the silenced version. The correct functioning and performances are guaranteed thanks to the optimised designing of the ventilating section. The electronics in the silenced version allows the chiller to work at an outdoor air temperature up to 50°C, even with partialisation of the cooling capacity and increase of the noise above 40+43°C.

### A range full of accessories

In addition to the traditional accessories, the chillers of the Z-POWER range can be equipped with total or partial recovery exchangers for hot water production up to 60°C. Adjustment devices of the fans speed are available in applications with outdoor air temperatures up to -15°C. Upon request, the chillers can be equipped with pumping unit with single or double electric pump. Chillers up to 500 kW using plate heat exchangers can be equipped with pumping unit with 1100 litre storage tank and single or double electric pump.

**Condensing section**

The geometry of the condensing section and the fluid dynamic flow generated by the fans have been designed to maximise efficiency of heat exchange and balancing the pressure drops, keeping the noise introduced into the environment low. Also the standard machine envisions a pressostatic step-type condensing control to allow operation up to +5 °C outdoor air temperature.

**Evaporator**

Plate or tube and shell evaporator (depending on model). The evaporator is equipped with two refrigerant circuits (one for each compressor), improving efficiency to partial loads.

**Compressor**

Semi-hermetic screw compressors specifically developed to function with R134a refrigerant are used in the Z-POWER range. Each compressor has 3 partialisation steps that become 4 if the economiser is present, thus enabling the chiller to operate in an excellent manner, even with partial loads, with a significant energy saving. The option enabling the modulating control of the cooling capacity is also available.

**EEV: Electronic expansion valve**

The chillers are equipped as per standard with latest generation electronic expansion valve managed by microprocessor control. As well as allowing precise control of the refrigerant gas flow, it allows accurate functioning of the chiller unit with an efficient response speed with respect to the traditional thermostatic expansion valve.

## General Features

### Declared conditions of use

TCAVBZ units are monobloc water chillers with air-cooled condensation and axle fans. TCAVIZ- TCAVSZ units are monobloc water chillers with air-cooled condensation and axle fans, in silenced set-up. The use of TCAVBZ, TCAVIZ and TCAVSZ chillers is envisioned in air conditioning installations where it is necessary chilled water, not for human consumption.

The machine is designed for outdoor installation.

The units comply with the following Directives:

- 2006/42/EC Machinery Directive;
- Low voltage Directive 2006/95/EC;
- Electromagnetic compatibility Directive 2004/108/EC;
- Pressure equipment directive 97/23/EEC (PED).

### Guide to reading the code

#### "SERIES" code

| T             | C            | A         | V                               | B   | Z                     | 1-2                   | 270÷1600                             |
|---------------|--------------|-----------|---------------------------------|---|-----------------------|-----------------------|--------------------------------------|
| Water chiller | Cooling only | Axle fans | Semi-hermetic screw compressors | Basic version<br>I Soundproofed version<br>S Silenced version | R134a refrigerant gas | Number of compressors | Approximate cooling capacity (in kW) |

#### Example: TCAVBZ 21110

- Water chiller;
- Cooling only;
- With axle fans;
- With two semi-hermetic screw compressors;
- Basic version;
- With R134a refrigerant gas;
- Nominal cooling capacity of approximately 1110.

## Structural features

- Support structure realised in galvanised sheet steel and painted with polyester powders (RAL 9018 white).
- Semi-hermetic high efficiency screw compressors and specifically developed to function with R134a refrigerant. The compressor has star-delta starting with reduced starting current by means of an equaliser valve and load partialisation, complete with integral protection and crankcase heater.
- The compressors are also equipped with cut-off valves on the refrigerant discharge pipe.
- Partialisation of cooling capacity of the chiller as in the following table:

| Model      | Compressors/<br>Steps | Circuits |
|------------|-----------------------|----------|
| 1270÷1390  | 1/3                   | 1        |
| 2331÷2641  | 2/6                   | 2        |
| 2681÷21600 | 2/8                   | 2        |

- Water side shell and tube exchanger with dry heat expansion in countercurrent type plates. The tube and shell heat exchanger is realised in carbon steel with copper pipes, air vent valve and water drain cock. The plate heat exchanger is made of stainless steel, equipped with double refrigerant circuit and single water-side circuit to improve energy efficiency with partial loads. Both types of heat exchangers are equipped with closed cell expanded polyurethane rubber insulation with protective film against U.V.A. rays.
- Victaulic hydraulic connection on evaporator, threaded female or Victaulic connections on heat recovery unit or on desuperheater.
- Air side heat exchanger made up from coils with mechanically expanded copper pipes on aluminium fins with reversible geometry to increase energy efficiency.
- Electric helical fans, with internal circuit breaker protection and accident-prevention protection grids. The fans are provided with pressostatic regulation to ensure operation up to +5°C outdoor air temperature.
- Cooling circuits realised with mild copper tube and welded with silver and steel alloys. Each cooling circuit is complete with cartridge drier filter, load connections, high pressure switch with manual rearm, low pressure switch with automatic rearm, gas passage indicator and presence of any humidity, electronic expansion valve (hermetic closure on the liquid line with unit at standstill), cock on the liquid line, safety valves on high pressure sections, intake line insulation closed cell expanded polyurethane rubber insulation with protective film against U.V.A. rays.
- Ecological R134A refrigerant fluid load.

## Electrical Control Board

- Electric control board in compliance with IEC Standards, in waterproof casing complete with:
  - electrical wiring arranged for power supply 400V-3ph-50Hz;
  - transformer for auxiliary circuit;
  - 230V-1ph-50Hz auxiliary power supplies;
  - 24V-1ph-50Hz control power supplies;
  - compressor protection phase monitor;
  - power contactors;
  - remote controls: remote ON/OFF, double Set-point (DSP accessory);
  - remote machine controls: compressor(s) functioning light, general lock light;
  - manoeuvre isolator switch, with door interlocking isolator;
  - automatic protection switch on auxiliary circuit;
  - protection fuses for each compressor (optional is the version with circuit breaker switches protecting each compressor);
  - automatic switches for fans protection;
  - auxiliary circuit protection fuses.
- Programmable electronic board with microprocessor, controlled by the keyboard inserted in the machine, remote controllable up to 1000 metres. This electronic board performs the following functions:
  - regulation and setting of unit inlet water temperature (with optional CCL accessory - linear capacity control - regulation is performed based on the outlet water temperature from evaporator);
  - management of safety timers; work timer for every compressor; automatic inversion of the compressors intervention sequence; the circulation pump or utility service (both on evaporator side and on condenser side); electronic anti-freeze protection; partialisation steps, the functions that regulate the intervention mode of the individual parts making up the machine;
  - management of the electronic expansion valve (EEV) with possibility of reading and displaying the intake temperature, the evaporation pressure, overheating and open state of the valve;
  - displaying of programmed functioning parameters, of temperatures of unit inlet and outlet water, of condensation, evaporation pressures and any alarms;
    - Multi-language management (Italian, English, French, German, Spanish) of displays.

- Management of alarms log. In particular, for every alarm, the following are memorised:
  - date and time of intervention;
  - alarm code and description;
  - inlet/outlet water temperatures values when the alarm intervened;
  - the condensation/evaporation pressure values at the time of the alarm;
  - alarm delay time from the switch-on of the connected device;
  - compressor status at moment of alarm;
  - self-diagnosis with continuous monitoring of the unit functioning status.
- Advanced functions:
  - set-up for serial connection with RS 485 output for dialogue with main BSM, centralised systems and supervision networks.
  - management of time bands and operation parameters with the possibility of daily/weekly functioning programs;
  - check-up and monitoring of scheduled maintenance status;
  - computer-assisted unit testing.

## Versions

- B**- Basic version (TCAVBZ).  
**I**- Soundproofed version with sound-resistant covering of the compressor (TCAVIZ).  
**S**- Silenced version complete with soundproofed covering on compressors and reduced speed fans (TCAVSZ).

## Available Installations

### Standard:

Installation without pump and without water buffer tank.

### Pump:

- P1** – Installation with pump.  
**P2** – Installation with increased static pressure pump.

**DP1** – Installation with double pump, including an automatically activated pump in stand-by.

**DP2** – Installation with increased static pressure double pump, including an automatically activated pump in stand-by.

### Tank & Pump:

- ASP1** – Installation with pump and water buffer tank.

**ASP2** – Installation with increased static pressure pump and water buffer tank.

**ASDP1** – Installation with double pump, including an automatically activated pump in stand-by and storage.

**ASDP2** – Installation with increased static pressure double pump, including an automatically activated pump in stand-by and storage.

### Factory Fitted Accessories

**P1** – Installation with pump.  
**P2** – Installation with increased static pressure pump.  
**DP1** – Installation with double pump, including an automatically activated pump in stand-by.  
**DP2** – Installation with increased static pressure double pump, including an automatically activated pump in stand-by.  
**ASP1** – Installation with pump and water buffer tank.  
**ASP2** – Installation with increased static pressure pump and water buffer tank.  
**ASDP1** – Installation with double pump, including an automatically activated pump in stand-by and storage.  
**ASDP2** – Installation with increased static pressure double pump, including an automatically activated pump in stand-by and storage.  
**DS** – Desuperheater with partial recovery of the condensation heat.  
**RC100** - Heat recovery with 100% recovery of the condensation heat. The accessory is complete of condensing control FI10□ and differential pressure switch on the recovery exchanger.  
**TRD** - Thermostat with display of the inlet water temperature at the recovery unit/desuperheater with possibility to set the activation set-point of an external regulation device if present.  
**FI10** - Electronic proportional device for continuous pressure regulation of the fan rotation speed up to the outdoor air temperature of -10°C.  
**FI15** - EC-FAN for the stepless speed regulation down to an outside air temperature of -15°C.  
**CR** – Power factor correction capacitors ( $\cos\phi > 0,94$ ).  
**IM** - Unit with circuit breaker switches protecting compressors and fans.  
**FDL** - Forced Download Compressors, partialisation or compressors switch-off to limit the absorbed current and power (Digital Input).  
**CCL** - Unit with linear capacity control compressors (25-100% for models with 2 compressors).  
**RR** - Unit with compressor suction cut-off valves (the discharge valve is as per standard).  
**SLO** - Oil level sensor (this accessory is recommended in installations where visual control of the compressor sight-glass is difficult or where a more in-depth monitoring is required).  
**GM** – High and low pressure gauges for each refrigerant circuit, complete of capillaries.  
**CMT** - Control of minimum and maximum values of power voltage.  
**RA** - Anti-freeze electric resistance on evaporator complete with activator.  
**RDR** - Antifreeze electric heater for desuperheater/recovery unit (only with DS or RC100), to prevent the risk of ice formation inside the recovery exchanger when the machine is switched off (as long as the unit is not disconnected from the power supply).

**RAS** - Storage tank antifreeze electric heater to prevent the risk of ice formation inside the inertial storage tank when the machine is switched off (as long as the unit is not disconnected from the power supply).  
**DSP** - Double Set-point (Digital Input).  
**CS** – Remotely modifies scrolling Set-point via analogue signal (4-20 mA).  
**BT** - Low temperature produced water, option complete with accessory FI10  
**SS** - RS 485 serial interface for logic dialogue with Building Automation, centralised systems and supervision network (proprietary protocol, Modbus RTU).  
**FTT10** - LON serial interface for connection to BMS with standard LON FTT10 protocol.  
**RAP** - Unit with copper/pre-painted aluminium condensation coils.  
**BRR** – Unit with copper/copper condensation coils.  
**RPB** - Condensing coils protection mesh.  
**RPE** - Lower compartment protection mesh.  
**SAM** – Spring anti-vibration mountings (supplied not installed).

### Accessories supplied separately

**KTR** - Remote keypad for remote control, with the same functions as the one built into the unit.

(\*) In the following conditions: condenser inlet air temperature 35°C; cooled water temperature 7°C; temperature differential at the evaporator 5 K; fouling factor equal to  $0.35 \times 10^{-4} \text{ m}^2 \text{ K/W}$ .

(\*\*) Sound pressure level in dB(A) referring to a 10 m distance from the unit, in free field and directionality factor equal to Q=2. The noise data refers to the unit without pump.

(\*\*\*) Total sound power level in dB(A) on the basis of the measurements made in compliance with the UNI EN-ISO9614 and Eurovent 8/1 Standards. The noise data refers to the unit without pump.

(●) Shell and tube evaporator accessory (STE) available for models 2331-2511.

(■) Absorbed current/absorbed power value without electric pump.

For the amount of R134a refrigerant load and Polyester oil load (POE), refer to the serial number plate on board machine.

(\*) In the following conditions: condenser inlet air temperature 35°C; cooled water temperature 7°C; temperature differential at the evaporator 5 K; fouling factor equal to  $0.35 \times 10^{-4} \text{ m}^2 \text{ K/W}$ .

(■) Absorbed current/absorbed power value without electric pump.

For the amount of R134a refrigerant load and Polyester oil load (POE), refer to the serial number plate on board machine.

(\*\*) Sound pressure level in dB(A) referring to a 10 m distance from the unit, in free field and directionality factor equal to Q=2. The noise data refers to the unit without pump.

(\*\*\*) Total sound power level in dB(A) on the basis of the measurements made in compliance with the UNI EN-ISO9614 and Eurovent 8/1 Standards. The noise data refers to the unit without pump.

For the amount of R134a refrigerant load and Polyester oil load (POE), refer to the serial number plate on board machine.

(\*\*) Sound pressure level in dB(A) referring to a 10 m distance from the unit, in free field and directionality factor equal to Q=2. The noise data refers to the unit without pump.

(\*\*\*) Total sound power level in dB(A) on the basis of the measurements made in compliance with the UNI EN-ISO9614 and Eurovent 8/1 Standards. The noise data refers to the unit without pump.

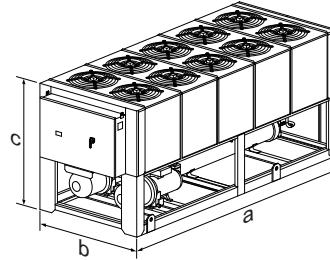

Table "A": Technical Data

(\*) In the following conditions: condenser inlet air temperature 35°C; cooled water temperature 7°C; temperature differential at the evaporator 5 K; fouling factor equal to  $0.35 \times 10^{-4} \text{ m}^2 \text{ K/W}$ .

(\*\*) Sound pressure level in dB(A) referring to a 10 m distance from the unit, in free field and directionality factor equal to Q=2. The noise data refers to the unit without pump.

(\*\*\*) Total sound power level in dB(A) on the basis of the measurements made in compliance with the UNI EN-ISO9614 and Eurovent 8/1 Standards. The noise data refers to the unit without pump.

(■) Absorbed current/absorbed power value without electric pump.

For the amount of R134a refrigerant load and Polyester oil load (POE), refer to the serial number plate on board machine.

(\*) In the following conditions: condenser inlet air temperature 35°C; cooled water temperature 7°C; temperature differential at the evaporator 5 K; fouling factor equal to  $0.35 \times 10^{-4} \text{ m}^2 \text{ K/W}$ .

For the amount of R134a refrigerant load and Polyester oil load (POE), refer to the serial number plate on board machine.

(\*\*) Sound pressure level in dB(A) referring to a 10 m distance from the unit, in free field and directionality factor equal to Q=2. The noise data refers to the unit without pump.

(\*\*\*) Total sound power level in dB(A) on the basis of the measurements made in compliance with the UNI EN-ISO9614 and Eurovent 8/1 Standards. The noise data refers to the unit without pump.

## Electronic controls

### Electronic controller

The keyboard with display makes it possible to view the working temperature and all the unit process variables, as well as providing access to setting parameters for the operating set points and their modification. For purposes of technical assistance, it allows password-protected access to the unit's management parameters (access for authorised personnel only).

#### DISPLAY:

displays the numbers and the values of all the parameters (i.e. outlet water temperature etc.), any alarm codes and resource status by means of strings.

#### ALARM key:

makes it possible to display the code and reset any alarms.

#### PROGRAM key:

makes it possible to programme the machine's fundamental functioning parameters.

#### ESC key:

makes it possible to switch the unit on and off.

#### UP key:

used to scroll through the list of parameters, statuses and any alarms; makes it possible to modify set points.

#### ENTER key:

allows confirmation of the selected parameters.

#### DOWN key:

used to scroll through the list of parameters, statuses and any alarms; makes it possible to modify set points.

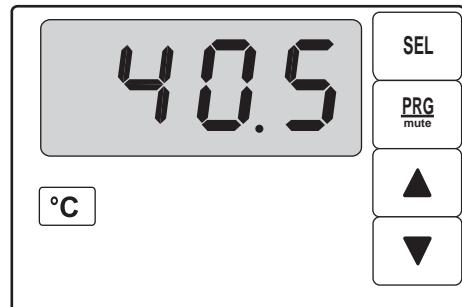

### KTR – Remote keyboard

The remote keyboard with display (KTR) allows the remote control and display of all of the unit's digital and analogue process variables. It is therefore possible to control all the machine functions directly in the room. It allows setting and management of time periods.

The temporary presence of two devices, on-board machine keyboard and remote keyboard, will cause the on-board machine terminal to be disabled.

### TRD – Thermostat with display

The introduction in machine of the thermostat accessory with display (TRD) allows displaying of the inlet water temperature at the recovery unit/desuperheater and setting the activation set-point of an external regulation device (e.g. ON/OFF 3-way valve), allowing a rational and efficient use of the recovered thermal energy.

#### DISPLAY:

displays the recovery unit/desuperheater inlet water temperature value.

#### SEL key:

allows setting the activation Set-point and differential of any external adjustment device.

#### PRG/mute key:

allows access to the parameters programming menu.

#### UP key:

allows scrolling the menu and modify the parameters.

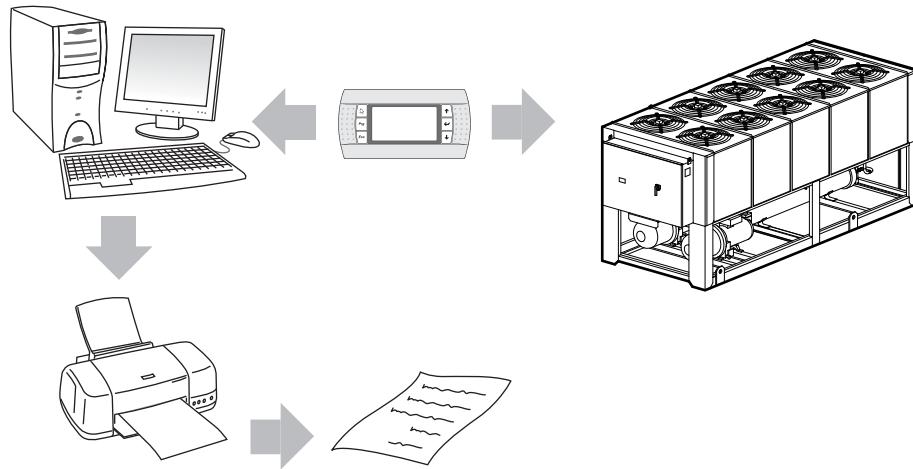

#### DOWN key:

allows scrolling the menu and modify the parameters.

## Serial Connection

### Serial Connection

Alternatively, the electronic control, with which all units are supplied, can communicate with an external system through a serial communication line.

### Supervision

In general, a supervision system allows access to all unit functions, such as:

- Making all settings which are accessible through the keyboard;
- Reading all process variables of the inputs and outputs, whether digital or analogue;
- Reading the various alarm codes which are present, and resetting them as necessary;
- reading all programming parameters and varying some of them.

### Note

For further information, contact the RHOSS after-sales support service.

## Performance

### Choice of machine and use of the performance tables

- Table "B" supplies the cooling capacity (QF) and the absorbed electric power (P), depending on the temperature of the evaporator outlet water with constant temperature differentials  $\Delta t = 5^\circ\text{C}$  and of the temperature of the outdoor air.
- Table "D" supplies the E.E.R., ESEER and IPLV indexes values for each model.
- Table "E" supplies the cooling capacity (%) and the total absorbed power (%) for each model, in correspondence of each supplied cooling capacity step.
- Within operating limits, table "B" may permit interpolations of performance but extrapolations are not permitted.
- Table "F" supplies the sound power in dB by octave band, the total sound power level in dB(A) and the sound pressure values in dB(A) for each model at different distances.
- Table "H" shows the values of corrective coefficients to be applied to the nominal values if water with glycol is used.

Ta = Outdoor air temperature (dry bulb).

Tue = Evaporator water output temperature ( $\Delta t$  input/output 5 K).QF = Cooling capacity (fouling factor equal to  $0.35 \times 10^{-4} \text{ m}^2 \text{ K/W}$ ).

P = Total electrical power absorbed.

Ta = Outdoor air temperature (dry bulb).

Tue = Evaporator water output temperature ( $\Delta t$  input/output 5 K).QF = Cooling capacity (fouling factor equal to  $0.35 \times 10^{-4} \text{ m}^2 \text{ K/W}$ ).

P = Total electrical power absorbed.

Table "B": TCAVBZ – TCAVIZ cooling capacity

Ta = Outdoor air temperature (dry bulb).

Tue = Evaporator water output temperature ( $\Delta t$  input/output 5 K).QF = Cooling capacity (fouling factor equal to  $0.35 \times 10^{-4} \text{ m}^2 \text{ K/W}$ ).

P = Total electrical power absorbed.

Table "B": TCAVSZ cooling capacity

Ta = Outdoor air temperature (dry bulb).

Tue = Evaporator water output temperature ( $\Delta t$  input/output 5 K).QF = Cooling capacity (fouling factor equal to  $0.35 \times 10^{-4} \text{ m}^2 \text{ K/W}$ ).

P = Total electrical power absorbed.

Ta = Outdoor air temperature (dry bulb).

Tue = Evaporator water output temperature ( $\Delta t$  input/output 5 K).QF = Cooling capacity (fouling factor equal to  $0.35 \times 10^{-4} \text{ m}^2 \text{ K/W}$ ).

P = Total electrical power absorbed.

**T<sub>w</sub>** = Inlet/outlet water temperature.

**Qt** = Recovery unit heating capacity.

**Q** = Recovery unit water flow rate.

**Δp** = Recovery unit pressure drops.

**C** = Recovery unit water content.

#### Functioning limits:

##### RC100:

- Produced hot water temperature 35÷50°C with admitted water temperature differential 4÷6 K;
- The minimum inlet water temperature admitted is equal to 30°C;
- With accessory RC100 the unit is provided with accessory FI10.

##### DS:

- Produced hot water temperature 45÷60°C with admitted water temperature differential 5÷10 K;
- The minimum inlet water temperature admitted is equal to 40°C.

(\*) Heating capacity with recovery unit fouling factor equal to  $0.35 \times 10^{-4} \text{ m}^2 \text{ K/W}$ . Conditions referred to unit complete with condensation control, chilled water temperature of 7°C and evaporator temperature differential of 5 K.

#### Attention

The units equipped with recovery unit permanently placed in series to compressor must be started in conformity with the dispositions of Ministerial Decree 1/12/2004 n. 329. This law is only valid in Italy. For installation in other countries, please abide by the local laws in force. The DHW can only be produced with the use of a further heat exchanger suitable for the purpose. Refer to the current laws and Standard in the place of installation.

**Tw** = Inlet/outlet water temperature.

**Qt** = Recovery unit heating capacity.

**Q** = Recovery unit water flow rate.

**Δp** = Recovery unit pressure drops.

**C** = Recovery unit water content.

#### Functioning limits:

##### RC100:

- Produced hot water temperature 35÷50°C with admitted water temperature differential 4÷6 K;
- The minimum inlet water temperature admitted is equal to 30°C;
- With accessory RC100 the unit is provided with accessory FI10.

##### DS:

- Produced hot water temperature 45÷60°C with admitted water temperature differential 5÷10 K;
- The minimum inlet water temperature admitted is equal to 40°C.

(\*) Heating capacity with recovery unit fouling factor equal to  $0.35 \times 10^{-4} \text{ m}^2 \text{ K/W}$ . Conditions referred to unit complete with condensation control, chilled water temperature of 7°C and evaporator temperature differential of 5 K.

#### Attention

The units equipped with recovery unit permanently placed in series to compressor must be started in conformity with the dispositions of Ministerial Decree 1/12/2004 n. 329. This law is only valid in Italy. For installation in other countries, please abide by the local laws in force. The DHW can only be produced with the use of a further heat exchanger suitable for the purpose. Refer to the current laws and Standard in the place of installation.

### Energy efficiency at partial loads - ESEER and IPLV indexes

- The E.E.R. index represents an estimate of the energy efficiency of the cooling unit in nominal design conditions. In reality, the operating time of a chiller in nominal conditions is usually less than the operating time in partial load conditions.
- The IPLV (Integrated Part Load Value) and ESEER indexes (European Seasonal EER) are those that estimate the average seasonal energy efficiency of the cooling unit on four load and outdoor air temperature conditions. In general, two chillers that have the same EER value can have different IPLV or ESEER values. In fact, for an air-cooled cooling unit, the average energy efficiency depends on the design choices and the temperature of the air entering the condensing coil.
- The IPLV and ESEER indexes, introduced respectively by the ARI (American Refrigeration Institute - ARI standard 550/590) and the European Community (EECCAC Energy Efficiency and Certification of Central Air Conditioners project), have the same formulation, but differ due to outdoor air temperatures (see table "C") and for the energy weights that are assigned to the four load conditions considered for the calculation: 100%, 75%, 50% and 25% and for Tw produced (6.7°C IPLV / 7°C ESEER).

|       |   |
|-------|---|
| IPLV  | $\frac{1*EER_{100\%} + 42*EER_{75\%} + 45*EER_{50\%} + 12*EER_{25\%}}{100}$ |
| ESEER | $\frac{3*EER_{100\%} + 33*EER_{75\%} + 41*EER_{50\%} + 23*EER_{25\%}}{100}$ |

where  $EER_{100\%}$ ,  $EER_{75\%}$ ,  $EER_{50\%}$ ,  $EER_{25\%}$  represent the efficiencies of the cooling unit in the four load conditions and at the temperatures indicated in table "C".

Table "C": load and temperatures conditions

| Outdoor air temperature |      |       |  |
|-------------------------|------|-------|--|
| Load                    | IPLV | ESEER |  |
| 100%                    | 35.0 | 35    |  |
| 75%                     | 26.7 | 30    |  |
| 50%                     | 18.3 | 25    |  |
| 25%                     | 12.8 | 20    |  |

- Table "D" shows the E.E.R., ESEER and IPLV values for each model. The high values of energy efficiency at partial loads were achieved thanks to optimisation of the heat exchangers and use of fans units independently managed according to the load conditions.

Table "E" shows the cooling capacity (%) and the total absorbed power (%) for each model, in correspondence of each supplied cooling capacity step.

Table "E"

| Steps (*) | Models    |           |            |
|-----------|-----------|-----------|------------|
|           | 1270÷1390 | 2331÷2641 | 2681÷21600 |
| 1         | P kW      | 50        | 27         |
|           | QF kW     | 52        | 28         |
| 2         | P kW      | 77        | 42         |
|           | QF kW     | 78        | 44         |
| 3         | P kW      | 100       | 50         |
|           | QF kW     | 100       | 46         |
| 4         | P kW      | -         | 77         |
|           | QF kW     | -         | 78         |
| 5         | P kW      | -         | 93         |
|           | QF kW     | -         | 94         |
| 6         | P kW      | -         | 100        |
|           | QF kW     | -         | 86         |
| 7         | P kW      | -         | -          |
|           | QF kW     | -         | 95         |
| 8         | P kW      | -         | -          |
|           | QF kW     | -         | 100        |

QF = Cooling capacity (%)

P = Total electrical power absorbed (%)

(\*) At nominal conditions.

## Loss of evaporator load

### Calculation of Pressure Drops

- The water flow rate at the exchanger is calculated according to the following formula:

$$G = (QF \times 0.86) : \Delta T$$

- Where:

$G$  ( $\text{m}^3/\text{h}$ ) = water flow rate at the exchanger;

$QF$  (kW) = cooling capacity;

$\Delta T$  ( $^{\circ}\text{C}$ ) = temperature differential;

- The pressure drops can be achieved from the selection software or estimated with the following approximate formula:

$$\Delta p_w = \Delta p_{w\text{nom}} \times (G : G_{\text{nom}})^2$$

- Where:

$\Delta P_r$  (kPa) = Pressure drop at the evaporator;

$\Delta P_{r\text{nom}}$  (kPa) = nominal pressure drop at the evaporator (table "Technical features");

$G$  ( $\text{m}^3/\text{h}$ ) = water flow rate at the evaporator;

$G_{\text{nom}}$  ( $\text{m}^3/\text{h}$ ) = nominal water flow rate at the evaporator (table "Technical Features").

### Calculation of residual static pressure

The residual static pressure values can be obtained from the selection software or from graphics, based on envisioned flow rates.

$\Delta P_r$  = Pressure drop.

$G$  = Water flow rate.

### N.B.:

For all machines, refer to the admissible operating limits and thermal differences ( $\Delta T$ ).

**Lw** Total sound power level in dB(A) on the basis of the measurements made in compliance with the UNI EN-ISO9614 and Eurovent 8/1 Standards.

**Lp** Sound pressure levels in dB(A).

For the TCAVIZ version (soundproofed ) subtract 2 dB(A) from the values of models TCAVBZ.

**Important:**

The Eurovent certification refers to the Lw sound power value in dB(A) and it is the only binding acoustic data.

The sound pressure levels refer to values calculated from the sound power for units installed in free field with directivity factor Q=2. In brackets is the measurement distance in metres.

The noise data refers to the unit without pump.

It is not possible to extrapolate sound pressure values for distances less than 10 m.

With outdoor air temperatures below 25°C, or in presence of accessory F110/ F115 for outdoor temperatures below 5°C, the machine decreases its noise to a value below the nominal indicated in table.

**Lw** Total sound power level in dB(A) on the basis of the measurements made in compliance with the UNI EN-ISO9614 and Eurovent 8/1 Standards.

**Lp** Sound pressure levels in dB(A).

**Important:**

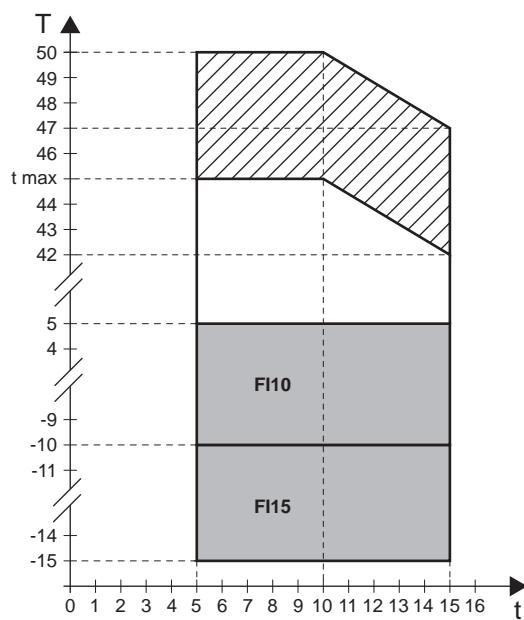

The Eurovent certification refers to the Lw sound power value in dB(A) and it is the only binding acoustic data.

The sound pressure levels refer to values calculated from the sound power for units installed in free field with directionality factor Q=2. In brackets is the measurement distance in metres.

It is not possible to extrapolate sound pressure values for distances less than 10 m.

With outdoor air temperatures below 25°C, or in presence of accessory FI10/ FI15 for outdoor temperatures below 5°C, the machine decreases its noise to a value below the nominal indicated in table.

## Functioning limits

- Standard functioning.
- Functioning with condensing control (FI10 - FI15).
- Functioning with partialised cooling capacity. If the unit is supplied with accessory CCL, the maximum reachable temperature limit of the outdoor air is 45°C.

$T$  (°C) = Outdoor air temperature (D.B.).

$t$  (°C) = Temperature of the water produced.

Temperature differential at the evaporator:  $\Delta T = 3 + 8^\circ\text{C}$ .  
However, consider the minimum and maximum flow rates in the table at the side.

| Model      | TCAVBZ - TCAVIZ                    | TCAVSZ                             |
|------------|------------------------------------|------------------------------------|
| 1270÷2641  | max $t = 45^\circ\text{C}$ (1) (2) | max $t = 43^\circ\text{C}$ (1) (3) |
| 2681÷21600 | max $t = 42^\circ\text{C}$ (1) (2) | max $t = 40^\circ\text{C}$ (1) (3) |

- (1) Evaporator water temperature (IN/OUT) 12/7.
- (2) Maximum outdoor air temperature with unit in standard operation running on full.
- (3) Maximum outdoor air temperature with unit in silenced mode.

Table "G": Evaporator water flow rate limits

| Model         | Min  | Max |
|---------------|------|-----|
| 1270          | m³/h | 22  |
| 1310          | m³/h | 26  |
| 1350÷1390     | m³/h | 30  |
| 2331÷2391 (*) | m³/h | 40  |
| 2421÷2511 (*) | m³/h | 40  |
| 2551÷2571     | m³/h | 60  |
| 2611÷2750     | m³/h | 75  |
| 2810          | m³/h | 90  |
| 2870          | m³/h | 90  |
| 2940÷2990     | m³/h | 100 |
| 21020         | m³/h | 110 |
| 21060÷21110   | m³/h | 120 |
| 21180÷21400   | m³/h | 130 |
| 21500÷21600   | m³/h | 195 |
|               |      | 330 |

(\*) Values referred to shell and tube evaporator accessory (STE).

### Use of antifreeze solutions

- The use of ethylene glycol is recommended if you do not wish to drain the water from the hydraulic system during the winter stoppage, or if the unit has to supply chilled water at temperatures lower than 5°C. The addition of glycol changes the physical properties of the water and consequently the performance of the unit. The proper percentage of glycol to be added to the system can be obtained from the most demanding functioning conditions from those shown below.

### Protection from freezing for seasonal stoppage

- Table "H" shows the multipliers which allow the changes in performance of the units to be determined in proportion to the required percentage of ethylene glycol.
- The multipliers refer to the following conditions: condenser inlet air temperature 35°C; chilled water temperature 7°C; temperature differential at evaporator 5°C.

- For different functioning conditions, the same coefficients can be used as their variations are negligible.
- Resistance on the water side exchanger (RA accessory) avoid unwanted effects from freezing during the winter operating stoppages.

Table "H"

| Minimum outdoor air temperature °C | 2     | 0     | -3    | -6    | -10   | -15   | -20   |
|------------------------------------|-------|-------|-------|-------|-------|-------|-------|
| % glycol in weight                 | 10    | 15    | 20    | 25    | 30    | 35    | 40    |
| Freezing temperature °C            | -5    | -7    | -10   | -13   | -16   | -20   | -25   |
| fc G                               | 1.025 | 1.039 | 1.054 | 1.072 | 1.093 | 1.116 | 1.14  |
| fc Δpw                             | 1.085 | 1.128 | 1.191 | 1.255 | 1.319 | 1.383 | 1.468 |
| fc QF                              | 0.975 | 0.967 | 0.963 | 0.956 | 0.948 | 0.944 | 0.937 |
| fc P                               | 0.993 | 0.991 | 0.99  | 0.988 | 0.986 | 0.983 | 0.981 |

fc QF = Cooling capacity correction factor.

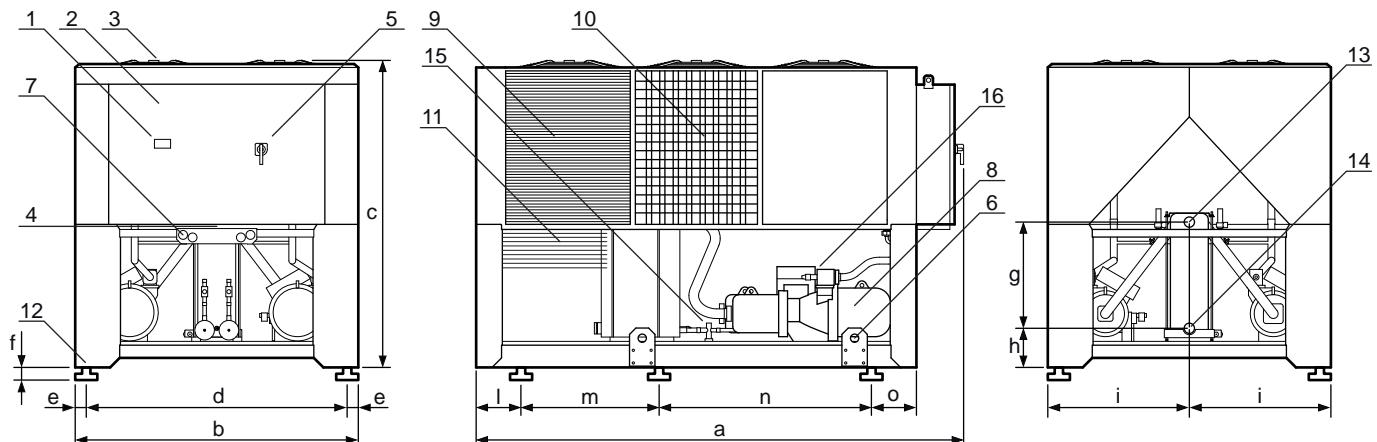

fc P = Correction factor for the total absorbed electrical current.

fc Δpw = Correction factor of the pressure drops in the evaporator.

fc G = Correction factor of the glycol water flow to the evaporator.

**Clearance and positioning**

| Model         | TCAVBZ – TCAVIZ - TCAVSZ |      |      |                 |
|---------------|--------------------------|------|------|-----------------|
|               | L1                       | L2   | L3   | L4              |
| 1270÷1390 mm  | 1800                     | 1500 | 2000 | 3500 (*)        |
| 2331÷2511 mm  | 1800                     | 1500 | 2000 | 1500 / 3500 (*) |
| 2551÷21600 mm | 1800                     | 1500 | 2000 | 3500 (*)        |

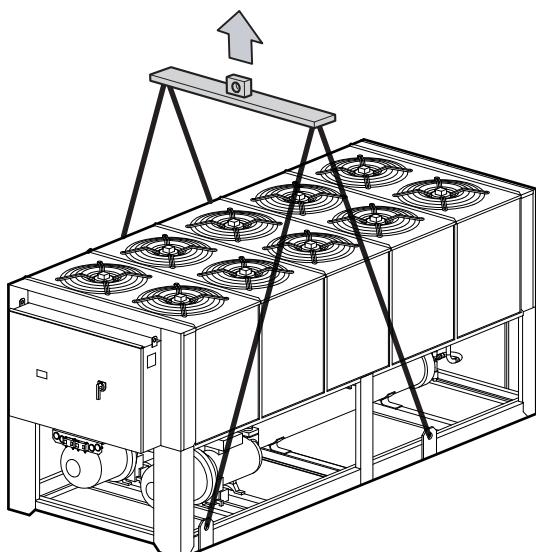

(\*) Maximum distance necessary at the extraction of the tube and shell heat exchanger.

**N.B.:**

- The space above the unit must be free from obstacles. If the unit is completely surrounded by walls, the distances specified are still valid, provided that at least two adjacent walls are not higher than the unit itself. There must be a minimum gap of at least 3.5m between the top of the unit and any obstacles above it.
- If more than one unit is installed, the minimum distance between the finned coils should be at least 2.5 m.
- For further information, contact the RHOSS after-sales support service.

**Installation**

- The unit is provided with Victaulic type hydraulic connections on the water inlet and outlet of the air conditioning system.
- The unit should be positioned to comply with the minimum recommended clearances, bearing in mind the access to water and electrical connections.
- The unit can be equipped with anti-vibration mountings on request (SAM).
- It is advised to install air vent valves, shut-off valves to isolate the unit from the remainder of the system and a low pressure drops filter on the water inlet in the chiller.

**Lifting and Handling**

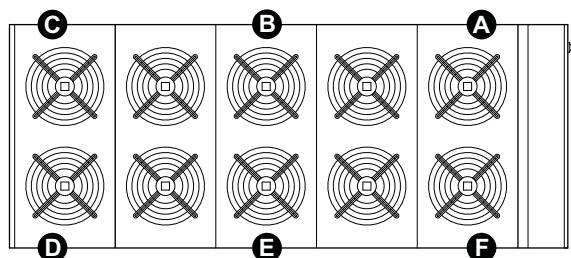

Lifting and movement of the unit must be performed with care, in order to avoid damages to the external structure and to the internal mechanical and electrical components. The unit can only be handled and/or lifted from the specific attachments provided on the basic framework. Use suitably long chains to guarantee stable lifting.

**Storage**

- The units cannot be stacked.
- The temperature limits for storage are -9°÷45°C.
- During lifting and movement operations ensure the unit always remains in horizontal position.

**Distribution of the weights**

**TCAVBZ – TCAVIZ – TCAVSZ 2331÷2511. Model with plates evaporator.**

(\*) The weight includes accessories RPE and RPB.

(\*\*) The weight and its distribution in the support points includes accessories RPE and RPB and the amount of water contained in the heat exchanger. For the TANK & PUMP versions the weight includes the water contained in the storage (1100 litres).

#### Accessories weights

With accessories RC100, DS and PUMP the total weight of the machine chosen from the above tables must be added to the weights of the accessory reported in the following table; the weight of the TANK & PUMP version already includes the weight of the PUMP accessory.

| Models   | PUMP | RC100 | DS  |
|----------|------|-------|-----|
| 1270 kg  | 160  | 200   | 100 |
| 1310 kg  | 160  | 220   | 100 |

## Electrical connections

**L** Line.  
**PE** Earth connection.  
**MI** Internal terminal board.  
**ME** External terminal board.  
**AG** General alarm.

**KPE1** Evaporator pump wiring  
(consensus at voltage 230 Vac).

**SCR** Remote control selector  
(control with clean contact).

**SDS** Double set-point connector (DSP accessory)  
(control with clean contact).

**LFC1** Compressor 1 functioning light  
(consensus in voltage 230 Vac).

**LFC2** Compressor 2 functioning light  
(consensus in voltage 230 Vac).

**LBG** Machine general lock light  
(consensus in voltage 230 Vac).

**FDL** Forced download compressors (FDL accessory)  
(control with clean contact).

**CS** Shifting Set-point (CS accessory)  
(signal 4÷20 mA).

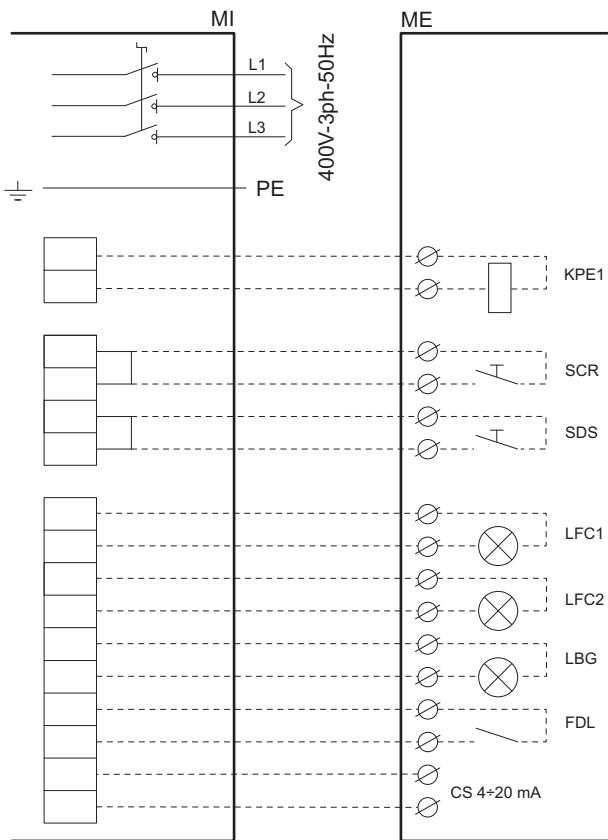

--- Connection by installer.

- The electrical panel (IP54) is accessible from the front panel of the unit.
- Connections must be made in compliance with current standards and with the diagrams provided with the machine.
- Machine earthing is legally compulsory.
- Always install a main automatic switch or fuses with adequate capacity and blackout power in a protected area or near the machine.

### ATTENTION!

The following diagrams only show the connections to be made by the installer.

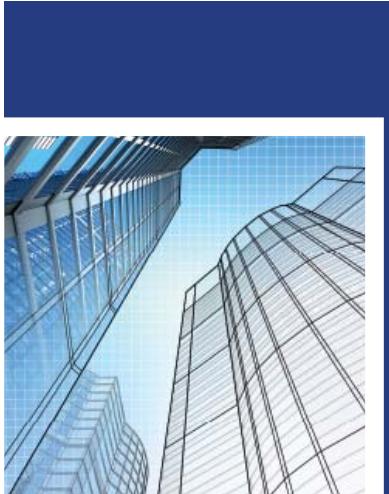

For electrical connections to the unit and the accessories, follow the wiring diagrams which are supplied with them.
